

Homework SP Farmer example with price effect

When yields are good for the farmer, they are usually also good for many other farmers. The supply is thus increasing, which will lower the prices. As an example, **we may consider prices going down by 10% for corn and wheat when yields are above average (scenario 1) and going up by 10% when yields are below average (scenario 3).**

1. Formulate the model where these changes in prices affect both sales and purchases of corn and wheat. Assume sugar beet prices are not affected by yields.

Decision variable

x_j = acres of land devoted to crop j , $j = 1, 2, 3$
 w_{11} = tons of wheat sold in scenario $s = 1$
 y_{11} = tons of wheat purchased in scenario $s = 1$
 w_{21} = tons of corn sold in scenario $s = 1$
 y_{21} = tons of corn purchased in scenario $s = 1$
 w_{31} = tons of sugar beets sold at favorable price in sc. $s = 1$
 w_{41} = tons of sugar beets sold at lower price in sc. $s = 1$

 w_{12} = tons of wheat sold in scenario $s = 2$
 y_{12} = tons of wheat purchased in scenario $s = 2$
 w_{22} = tons of corn sold in scenario $s = 2$
 y_{22} = tons of corn purchased in scenario $s = 2$
 w_{32} = tons of sugar beets sold at favorable price in sc. $s = 2$
 w_{42} = tons of sugar beets sold at lower price in sc. $s = 2$

 w_{13} = tons of wheat sold in scenario $s = 3$
 y_{13} = tons of wheat purchased in scenario $s = 3$
 w_{23} = tons of corn sold in scenario $s = 3$
 y_{23} = tons of corn purchased in scenario $s = 3$
 w_{33} = tons of sugar beets sold at favorable price in sc. $s = 3$
 w_{43} = tons of sugar beets sold at lower price in sc. $s = 3$

Objective function

objective fn

$$\begin{aligned}
 \min \quad & 150x_1 + 230x_2 + 260x_3 \\
 & + \left[\frac{1}{3}(1.1) \left(238y_{11} + 290y_{21} - 170w_{11} - 150w_{21} \right) - 36w_{31} - 10w_{41} \right] \\
 & + \left[\frac{1}{3}(1) \left(238y_{12} + 210y_{22} - 170w_{12} - 150w_{22} \right) - w_{32} - 10w_{42} \right] \\
 & + \left[\frac{1}{3}(0.9) \left(238y_{13} + 290y_{23} - 170w_{13} - 150w_{23} \right) - w_{33} - 10w_{43} \right]
 \end{aligned}$$

Constraint

$x_1 + x_2 + x_3 = 500$			First-stage constraint: Shared across all scenarios (non-anticipativity)		
$3x_1 + y_{11} - w_{11} \geq 200$	$2.5x_1 + y_{12} - w_{12} \geq 200$	$2x_1 + y_{13} - w_{13} \geq 200$			
$3.6x_2 + y_{21} - w_{21} \geq 240$	$3x_2 + y_{22} - w_{22} \geq 240$	$2.4x_2 + y_{23} - w_{23} \geq 240$			
$w_{31} + w_{41} \leq 24x_3$	$w_{32} + w_{42} \leq 20x_3$	$w_{33} + w_{43} \leq 16x_3$			
$w_{31} \leq 6000$	$w_{32} \leq 6000$	$w_{33} \leq 6000$
